

# OmniSeq INSIGHT® Gene List

OmniSeq INSIGHT® is a comprehensive genomic profiling test that uses next generation DNA sequencing of the full exonic coding region of 523 genes to detect small variants (single and multinucleotide substitutions, insertions, deletions and indels), and copy number alterations (gains and losses), and includes calculation of microsatellite instability (MSI) and tumor mutational burden (TMB) genomic signatures. RNA is also sequenced to detect fusions (rearrangements) and splice variants, and to measure mRNA expression in 64 immune genes, in addition to PD-L1 protein expression by immunohistochemistry (IHC).

| Genomic & Immune Profiling   |          |         |         |           |          |         |        |          |         |         |          |
