Technical Component Flow Cytometry Reflex Criteria	
INTEGRATED ONCOLOGY uses a 24 antibody panel for peripheral blood/bone marrow and a 21 antibody panel for tissue/fluids. If necessary, additional antibodies will be added based on the following reflex criteria. Additional CPT codes and associated charges will apply if reflex testing is performed.	
<ul style="list-style-type: none"> If submitted history of monoclonal gammopathy or if ≥0.5% plasma cells are detected cytoplasmic kappa and lambda light chains, and possibly CD138, will be added. If monoclonal/suspicious B-cells are present in blood or bone marrow samples, CD23, FMC-7, CD22, CD103, and CD11c will be added; if the atypical cells express CD103, CD25 will be added; if surface immunoglobulin light chains are absent, cKappa and cLambda may be added. If atypical lymphoblasts detected, CD1a, cCD3, CD22, CD25, cCD79a, cMPO, and/or cTdT may be added. 	<ul style="list-style-type: none"> If ≥10% blasts are present, CD15, CD11c, CD25, cMPO, cTdT, cCD79a, cCD3, CD61, CD41, CD235a, and CD71 may be added. If atypical B-lymphoblasts are detected, cTdT, cCD22, cCD79a, MPO, and cCD3 may be added. If atypical T-cells possibly representing T-cell lymphoma are detected, CD1a, CD11c, CD25, TCRA, TRCGD, cTdT, CD30, CD52, cCD3, and CD103 may be added. If insufficient sample for a full study is received or atypical findings outside the above protocols are detected, you will be contacted by an analyst in order to define a strategy for the case.
